# RASHEN PERERA

## CYBERSECURITY UNDERGRADUATE

## CONTACT

**Phone:**
076 313 3220

**Email Address:**
rashenperera86@gmail.com

**Address:**
No.60.Godalla,Dankotuwa

**Profiles and Portfolio Website**

**LinkedIn** - www.linkedin.com/in/rashen-perera-271857300
**GitHub** - https://github.com/RashenPerera77
**My Reports** - Project Reports
**My Portfolio website** - https://rashenperera77.github.io/Rashen-Perera-Portfolio./

## SOFT SKILLS

- Teamwork
- Time Management
- Leadership
- Problem Solving
- Effective Communication
- Critical Thinking

## TECH SKILLS

- Cybersecurity: Ethical Hacking, Penetration Testing, Threat Hunting (Splunk), Memory Forensics (Volatility), Vulnerability Scanning (OpenVAS, OWASP ZAP)
- Programming Languages: Python, C#, JavaScript, PHP, HTML5, CSS3
- Web Development: .NET, Node.js, Express.js, Tailwind CSS, RESTful APIs
- Databases: MySQL, SQL Server, MongoDB
- Tools & Platforms: Kali Linux, Metasploit, Wireshark, AWS (EC2/S3), Git/GitHub
- Networking: Network Security, Cisco Lab Configuration, SSH MFA Implementation
- Design & Fundamentals: UI/UX Principles, Data Structures & Algorithms (DSA), Responsive Design

## PROFILE

Dedicated Cyber Security Student and Security Researcher with a strong foundation in Penetration Testing, Vulnerability Assessment, and Secure Application Development. Experienced in executing structured security engagements and building secure, commercial-grade systems. Proficient in identifying and mitigating network threats using industry-standard tools like Kali Linux, Metasploit, and Splunk, with a commitment to maintaining data integrity and operational security.

## EDUCATION

**Bachelor of Cybersecurity**
Asia Pacific Institute of Information Technology(APIIT) 2024- 2027

**G.C.E. Advanced Level Passed in the Commerce Stream**
St. Joseph Vaz College 2023

## PROJECTS

**End-to-End Penetration Testing & Vulnerability Assessment**

Executed a comprehensive simulated penetration test following the structured methodology of a professional security engagement within an isolated lab environment.

- Conducted advanced exploitation using Metasploit to target MS17-010 (EternalBlue) vulnerabilities, achieving full system compromise and demonstrating post-exploitation persistence.
- Performed multi-layered vulnerability scanning using OpenVAS and Nmap NSE, identifying critical risks like MS15-034 (HTTP.sys RCE) and providing actionable remediation insights.
- Utilized Splunk for active threat hunting and log analysis to monitor, document, and respond to suspicious network activity during attack simulations.

**Secure "Lost and Found" Web Portal**

- Engineered a secure portal for APIIT students to report and track lost items while maintaining high data integrity.
- Focused on Secure Coding practices to defend against SQL Injection and Cross-Site Scripting (XSS).
- Integrated Splunk for active threat hunting to monitor logs and identify suspicious activity within the portal.
- Performed vulnerability assessments using OWASP ZAP to ensure the platform met security standards before internal release.

**Healthcare Cloud Security Strategy**

- Developed a defensive cybersecurity strategy focused on protecting healthcare data within cloud infrastructures.
- Simulated various threat models using Metasploit to identify vulnerabilities in Windows Server environments.
- Designed a Defense-in-Depth protocol to safeguard sensitive patient information against unauthorized access.
- Performed network reconnaissance and port scanning to map and harden the attack surface.

**Network Traffic Interception & Cryptographic Analysis**

- Demonstrated sophisticated cyber-attack vectors including Man-in-the-Middle (MiTM) interceptions and offline cryptographic cracking.
- Executed ARP Cache Poisoning using Bettercap to intercept and analyze real-time network traffic, identifying accessed domains and profiling active network devices.
- Captured and cracked WPA2 4-way handshakes using Aircrack-ng and dictionary-based attacks to recover wireless pre-shared keys.
- Recovered plaintext credentials from Windows SAM database hashes using John the Ripper, highlighting the critical importance of secure hashing algorithms.

## CERTIFICATIONS

- ISO/IEC 27001:2022 Information Security Associate
- ChatGPT for Cybersecurity – Simplilearn
- Cybersecurity for Finance – Simplilearn
- Cybersecurity Awareness: Ransomware – LinkedIn
- Cybersecurity Terminology – LinkedIn
- Offensive Security Intro - tryhackme
